Zero Cool by John Lange Michael Crichton, who is now well-known for such work as the Andromeda Strain and Jurassic Park, wrote ten earlier novels under pen names, eight of them were written as John Lange, one as Jeff Hudson, and one as Michael Douglas (combining his own name with that of his brother Doug). Zero Cool was Crichton's fifth published novel and was published in 1969 as John Lange. Andromeda Strain released the same year was published under his real name. Crichton wrote Zero Cool while enrolled at Harvard Medical School. Coincidentally, Zero Cool stars a young doctor. Not sure if there's a connection there. Hmm. In Zero Cool, Dr. Ross, a radiologist, flies to Spain to give a talk at a medical conference in Barcelona and to spend a month in the south of Spain the beaches of which he imagines are dotted with bikini-clad girls. He quickly meets an astonishingly beautiful brunette (Angela) as his sunglasses fall onto her when he can't stop staring at her. He is shortly thereafter confronted by a man who tells him not to perform an autopsy or he will be killed and a group of men who tell him he will perform an autopsy or be killed. As he is not even a pathologist and certainly is not licensed to practice in Spain, this all makes little

sense. Dr. Ross spends the rest of his so-called vacation being shuttled between different factions who want his services in pursuit of their "cause." Dr. Ross is absolutely clueless as to what is going on and doesn't know who to trust, if anyone, not even his new girlfriend Angela. The action continues in this book at a frenetic pace as right crosses and double-crosses take place. All in all, it is a fun book to read and it is hard to put down. It works well as quick entertainment.
